Vertical Elevating Prefeeder

The vertical elevating prefeeder is a space-saving solution for the gentle transfer of bulk parts from the floor level to high discharge heights. It features an ergonomic load height, up to 4 cu. ft. of bulk part storage and configurable discharge height.

A variety of cleated, FDA approved belts are available to suit a wide range of parts.

Features

- Functions to pre-orient or orient parts
- Bulk storage with ergonomic load height transferring to high discharge
- Stainless steel construction
- Smaller footprint compared to standard elevators
- Various cleated, FDA approved belt configurations
- Space-saving vertical elevation of parts
- Constant or variable speed motors
- 1-4 cu. ft. bin capacities
