Drum Feeder

Drum Feeder

An economical alternative to the traditional vibratory feeders. These space-saving feeders operate quietly without transferring vibration to the machine base.

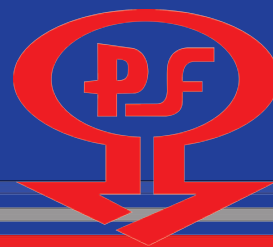

As the drum rotates, the ribs inside the drum agitate and orient your parts, transporting the parts to the liner track or belting system.

Specifications

- 60+ppm, depending on the parts being fed
- Economical alternative to traditional vibratory feeders
- Easy to redesign for new or modified product
- Ability to do tooling changeover for feeding different parts
- No transfer of vibration to the base plate
- Quiet and gentle operation
- Long-life tooling
- High-level sensor
- Smaller footprint (Approx 6" wide)
- Quicker delivery time

Features

- Hopper for parts storage and delivery
- Option for multi-lane output
- Loading chute
