

The Performance Feeder's Drum Feeder is the economical alternative to the traditional vibratory feeders. These space-saving feeders operate quietly without transferring vibration to the machine base. Drum Feeders are perfect for feeding your miniature components like springs, pins, fasteners, eyelets, etc.

As the drum rotates, the ribs inside the drum agitate and orient your parts, transporting the parts to the liner track or belting system.

Specifications

- 60+ppm, depending on the parts being fed
- Economical alternative to traditional vibratory feeders
- Easy to redesign for a new or modified product
- Less costly to change tooling to feed different parts
- No transfer of vibration to the machine base
- Quiet and gentle operation
- Long-life tooling
- High-level sensor on linear tooling standard
- Small footprint (approximately 6" wide)
- Quicker delivery time

Features

Optional Configuration:

- Hopper for parts storage and delivery
- Option for multi-lane output
- Loading chute

Single linear tooling
